

PCRWRD Statement Regarding Requested Change to Phase I Report:

“Our primary concern is with having language that is consistent with regulatory requirements. The current language regarding capacity of conveyance and treatment systems in central Tucson could be interpreted to state that we are not in compliance. Our requested change is intended to clarify that we remain in compliance with ADEQ regulations. The repercussions of a misinterpretation by ADEQ could result in a moratorium on future connections to that system. The requested changes are as follows:

1. Delete the word “new” in reference to the wastewater quality regulations because they have been in place for many years; and
2. Delete the sentence that describes the wastewater system in central Tucson as being “at or near capacity” and replace with this sentence: “The wastewater system in the central Tucson area is projected to approach capacity in the future unless the proposed changes to the system are made.”
